What Is Set

ClockSync II updates the following information on each Servant:

• Current Date.
• Current Time.
• Status of Daylight Saving Time (the Daylight Saving Time flag in the "Date & Time" control panel.
• City location (from the "Map" control panel).
• Latitude and Longitude (from the "Map" control panel).

One interesting tidbit is that many people (including Apple) pronounce DST as "Daylight Savings Time", in the plural form.   It's not - we only save time once.   It should be "Daylight SAVING time". For more information about the history and reasons for Daylight Saving Time, visit the web page at (http://www.energy.ca.gov/energy/daylightsaving.html).
