MAXpower G3 PDS SERIES POWERPC 750 UPGRADES

➤ The Old-Time Revival Just Rolled Into Town.

Most Macintosh enthusiasts have, over the years, formed a special relationship with their computers. They have grown up with the Mac, and the love and passion they have for it has translated into a loyalty never before seen in the computer industry. The problem lies in the fact that this industry, and its technology, is growing at an unprecedented rate. The older Macs, although rock-solid, are considerably slower and are growing old. Literally. It's time for a revival.

Newer Technology, Inc., the industry leader in manufacturing Macintosh peripherals, has developed the answer for the highly dependable yet painfully slow 6100, 7100, and 8100 PowerMacs.

It's time for the MAXpower G3.

Dance In The Aisles and Sing Praise...Eight Times Faster.

Slamming a MAXpower G3 processor upgrade into a 6100, 7100, or 8100 will result in speed increases six to eight times that of the stock speed. The MAXpower G3, winner of numerous awards and honors, is based on the G3 PowerPC 750 microprocessor. The utilization of the PowerPC 750's backside cache greatly enhances the system performance, and gives the once feeble 6100, 7100, or 8100 the power to dance in the aisles and sing hallelujah.

Miracles Available in 210MHz and 240MHz.

There are two configurations: one for the 6100 and one for the 7100/8100. There are also two speeds for each configuration: a 210MHz with 512K cache model, and a 240MHz with 1MB cache model. In comparison, Apple's Power Mac G3 models (233 and 266) use 512K of backside cache. You can even use your existing Apple video or AV cards too. Combine that with the fact that upgrading is cheaper and easier than buying and configuring a new system, you can see why people still do believe in miracles. It just so happens that this miracle comes in several different forms.

It's All Included.

MAXpower G3 comes with our Gauge Series performance tools as well as a trial copy of SpellTools™ – the universal spell checker and text processing tool. A two-year warranty is also included.

MAXPOWR G3 PDS

| Model | Specifications | Compatibility |
|----------------------|-----------------------------------|---|
| MAXpowr G3 6100 | 210/512K/105 or 240/1MB/160 | 6100/60, 6100/60AV, 6100/66, 6100/66AV, 6100/66 DOS Workgroup Server 6150/60 Performa 6110, 6112, 6115, 6117, 6118 |
| MAXpowr G3 7100/8100 | 210/512K/105 or 240/1MB.160 | 7100/66, 7100/66AV, 8100/110, 7100/80, 7100/80AV, 8100/80, 8100/80AV, 8100/100, 8100/100AV Workgroup Server 8150/80, 8150/110, 9150/80, 9150/120 |

Interface

Processor Direct Slot (PDS)

7100/8100 PDS Video Support

The Apple HPV Video card or the Apple AV card attaches to the MAXpowr G3 through a pass-through connection. The displaced card requires one NuBus slot space.

6100 Series Compatibility

The Apple AV card attaches to the MAXpowr G3 through a pass-through connection.

An Apple NuBus adapter board or an Apple DOS Compatibility card cannot be used with the MAXpowr G3 upgrade

Bus Speed Considerations

The MAXpowr G3 runs at the maximum bus speed multiple possible in your computer model. While the upgrades are advertised as "210MHz" and "240MHz", the actual speed will be *at least* these speeds, depending upon the stock bus speed multiple.

Required Software

MAXpowr G3 System Extension (supplied)

MAXpowr G3 Control Panel (supplied)

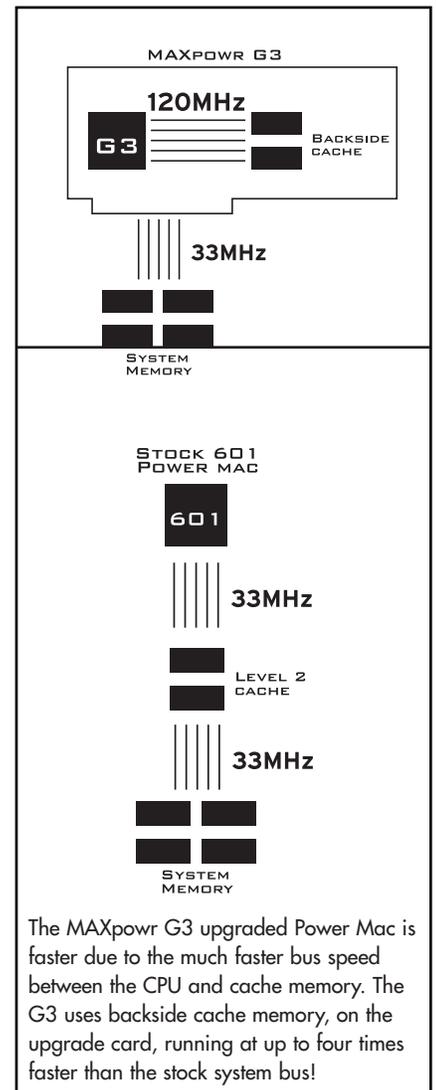

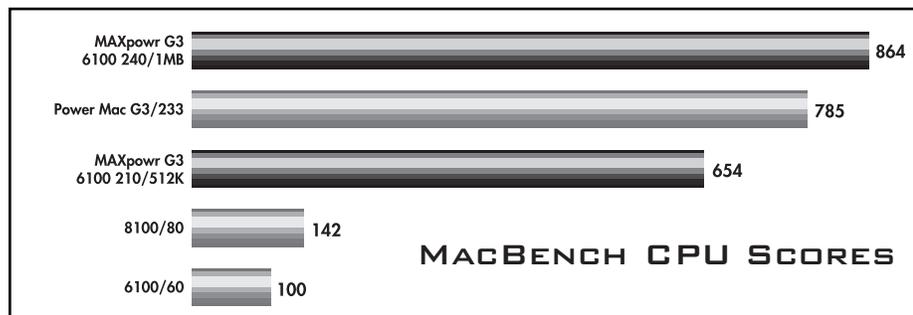

Motorola LibMoto (supplied)

Support

Two years, parts and labor warranty

30-day money back guarantee

Unlimited (toll-free in U.S.) Technical Support
