

## LightWayText Utilities

# ReadMeMaker Manual

ReadMeMaker are the utilities which make a self-executive type document from the text document of LightWayText. A self-executive type document is the ReadMe application that it itself is independence, and, text editor such as LightWayText shouldn't be necessary, and the contents of the document can be read.

ReadMeMaker copes with the text document made with LightWayText and iText. The self-executive type document made with ReadMeMaker can be distributed freely.

## How to Use ReadMeMaker

1. When ReadMeMaker is carried out, this dialog is indicated.
2. When "Continue" button is pushed, file choice dialog is indicated.
3. When a text document is chosen, the self-executive type document of the name of "text document ReadMe" is made.
4. A "Quit" button is pushed and finished.

It can be made by [Drag & Drop](#) doing a text document in ReadMeMaker, too. ReadMe application is equipped with only the minimum function which is necessary for the perusal of the document.
