Sound Design Software Packed With Effects -

sonicWORX Artist is perhaps the world's most complete sound design/effects processing software available at the time. Packed with over 60 effects as it comes out of the box, no other software can keep up with variety and novelty of algorithms. 'Standard' effects such as vocoders, pitch shift, time stretch, ring modulator, chorus, flanger, reverb, distortion, maximizers and even algorithms rarely found such as true sound Morphing, Transform&Multiply and really weird things like a Telephone Line Simulator or Wow&Flutter are combined with a wealth of new and unique DSP effects such as Drumloop Jungelizer, Atmosphere Designer, Tubulator, Cellular Morphing and Turbulence that leave nothing to desire. Being an up-to-date product, this software of course also offers our high end Pitch Shifting with polyphonic Harmonic Correction and more recent effects such as numerous Wavelet-based sound manipulations.
