

Upgrading

Updating Your Registered Copy

UpdateAgent 3.0 is free to all registered users. If you've already registered UpdateAgent, follow these steps to gain full access to the new version:

- 1 Do not throw away your old version of UpdateAgent until you have upgraded to the new version
- 2 Open the new version of UpdateAgent
- 3 From the splash screen, press the Upgrade button

That's it! UpdateAgent searches your hard disk(s) for any unlocked copies. When it finds one, it copies the registration information to the new copy.

Tips

Delete your old copy so it isn't launched inadvertently by the Auto Update program. Delete the old Auto Update extension in your System folder. Back up the new copy on another drive for safety.

Version 3 uses a new structure for the history information. Therefore, it deletes the old copy. This means that you will see updaters that you previously chose to Skip.

If you don't see the new program icon, delete all the old copies and rebuild your desktop. To rebuild the desktop, restart and hold down the command and option keys.

Change History

3.0 - Tons of new features, a cool new interface. Really a whole new product.

2.6 - Changed the name from Insider Updates to UpdateAgent. Improved the speed to download the database of updaters. Added web hot links for easier collaboration. Added enhanced Upgrade notification.

2.5 - It's all about speed. UpdateAgent scans 2.5 times faster. We also beefed up the internet connection to 10Mbps.

2.0.1 - Fixed a bug that could cause erratic performance on 68k Macs.

Upgrading

2.0.0 - Added ability to scan specified drives only. Improved display and selection of applicable updaters. Added ability to select folder for downloaded updaters. Deployed robot to constantly search for updaters. Added ability to download updaters without scanning the disks again. Added support for Internet fire-walls.

1.5.1 - Fixed a bug that could download an incorrect updater. Eliminated updating older versions of software when newer versions are installed. Enhanced the ability to identify and download applicable updaters.

1.0.1 - Fixed a bug that prevented UpdateAgent from launching on a PowerPC running Classic Networking.
