

1.4.5 - Mar 29, 1999

- Fixed a bug that caused SchemeChecker to stop working after a couple of launches.

1.4.4 - Mar 3, 1999

- SchemeChecker remembers the selected scheme folder between launches.
- The new resources revealed in the Kaleidoscope 2.1.2 documentation were added.

1.4.3 - Jan 17, 1999

- The lists of folder/file icons have been thoroughly examined, and a few resource IDs that were left out have been added.

1.4.2 - Nov 20, 1998

- Minor update to add support for the new resources added in Kaleidoscope 2.1.1
- Cleaned up some minor details in the lists of MacOS 8.5 icons.

1.4.1 - Sept 28, 1998

- Minor update to add support for the new resources introduced in Kaleidoscope 2.1 and MacOS 8.5.
- A couple of minor bugs were fixed.

1.4 - Aug 20, 1998

- SchemeChecker now does a better job at checking schemes configured to be used only with Kaleidoscope 2.0 or later. It also allows schemes built for earlier versions of Kaleidoscope to contain the new Kaleidoscope 2.0 resources in areas where the resource IDs don't overlap.
- Kaleidoscope now checks the "Minimum Kaleidoscope version" entry in the Colr ID 129 resource for errors.
- You can now make SchemeChecker automatically fix any unset System Heap and Purgeable bits. This feature is accessed through the "Options..." dialog.
- When you select a different scheme in the Result window, the displayed information no longer reverts to the "further info" field.
- The Result window uses a document window, allowing you to switch between the windows in SchemeChecker and use the menus.
- A bug that prevented schemes with a comma in the name to be checked has been fixed.
- The "Save results..." button in the Report window had by mistake been disabled in version 1.3. It now works again.

1.3 - May 24, 1998

- Scheme Checker now lets you select any folder to list the schemes in the folder (and any sub-folders).
- This means that you can make schemeChecker check all the schemes on your hard drive with just a few clicks. Be aware that listing all the schemes on your hard drive can take a while.
- The main window can now be resized to view a longer list of schemes.
- The help window is now a regular window instead of a dialog. You no longer have to dismiss the help window to access the buttons on the main window.
- The feature which lets you customize the search criterias is now accessed through the "options" button.
- The result window has been improved. You no longer have to click "info" to display information about a missing resource. The info will display in the result window when you click a

resource in the list.

- A bug which prevented SchemeChecker to run with some versions of HyperCard should be fixed. If you still have problems using schemeChecker with HyperCard 2.4, try using HyperCard 2.3.5 instead.

1.2 - March 13, 1998

- New code for fixing misset bits. SchemeChecker now fixes errors much faster than earlier versions.
- Added the option to customize the required resource list when checking schemes. This feature can be accessed by option-clicking the search buttons.
- Added some new resources to the resource lists, and added descriptions to all the icons from the Appearance Extension.

1.1.1 - Feb 2, 1998

- Added some resources (which were hardly used) to the resource lists.
- A bug which made the currently active scheme appear in the list of schemes was fixed.

1.1 - Jan 23, 1998

- Added support for the Kaleidoscope 1.8 resources.
- Fixed a bug which could prevent SchemeChecker from reporting all resources that were not needed.
- Large parts of the code has been rewritten in order to support the way Kaleidoscope 1.8 handles aliases of the scheme folder and color scheme files.
- Added support for BeBox schemes
- Made some changes to make SchemeChecker handle schemes with custom WDEFs better.
- The icon and the logo were changed
- Fixed a bug which caused the "Check new/updated" button to check all schemes.
- Removed the annoying "version patch" which was added to all schemes when the bad bits were fixed.

1.0.2 - Oct 15, 1997

- Added support for new resources introduced in version 1.7.3 of the Kaleidoscope control panel.

1.0.1 - Sept 14, 1997

- Fixed a few small bugs
- The minimum list of required resources was slightly changed

1.0 - July 30, 1997

- Initial release.
