

### Short Cuts & Tips:

- Use the Cut or Clear option from the “Edit” menu to clear an item from the list.
- If you’re trying to use the Help key as a hotkey (to emulate any of the keys supported by KeySwapper) and you can’t seem to do so with your system you need to:
  - 1) Start with all extensions off
  - 2) Open the KeySwapper control panel
  - 3) Double-click on the item you wish to change to use the Help key as the hotkey
  - 4) When the hotkey dialog is open, hit the Help key
  - 5) Click the OK button
  - 6) Close the KeySwapper control panel
  - 7) Reboot
  - 8) That’s it!
