

Customizing KeySwapper (Preferences)

To set any options for KeySwapper just click the “Prefs” button from the KeySwapper Control Panel window.

Here is the description of the check boxes:

- **Icon at Start-up:**
If checked, an icon will be displayed during startup.
- **Disable Caps Lock:**
If checked, the Caps Lock key will be disabled (if the Caps Lock key is down, any characters you type will be lowercase unless the shift key is down as well).
- **Font Info:**
You can change the font used in the list (in the control panel).

Special Applications:

You can create a list of applications that cause problems while using KeySwapper. If the application is completely KeySwapper unfriendly you can turn KeySwapper off in the application entirely by checking the “Turn Off KeySwapper in this application”. Sometimes an application will have problems with certain aspects of KeySwapper such as the auto-copy, auto-paste, or clip conversion. If so, uncheck the appropriate check boxes depending on what problems you are having with the application (you'll have to experiment with applications to find what will work).

To add an application to the list, click the “Add” button, select the application and click the “Open” button. Check the appropriate check boxes for that application. To change options for an application already in the list, select the application in the list and click the “Edit” button. To remove an application from the list, select it with the mouse and click the “Delete” button.
