Installation

efore you install Extension Overload, make sure that you have a compatible Mac. Your Macintosh must meet the following requirements:

* a 68020 or newer processor – which means that Macs with 68000 processors are excluded but all others are fine, including Macs with a PowerPC processor.

* 2 MB of free RAM. This means that when you choose "About this Macintosh" or "About this Computer" from the Apple menu in the Finder, the largest unused block must be at least 2 MB.

* System 7 or Mac OS 9 is required. All versions from 7.0 through 9 are supported.

Installing Extension Overload

The installation process is simplicity itself: Copy the Extension Overload application to your hard disk. You can put it wherever you want; it does not need to be put in a special location.
