THE CASTLE ADVENTURE GAME CD-ROM
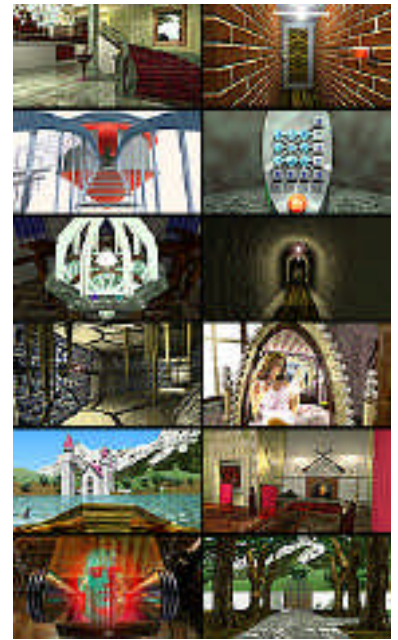

BOX When Noemi suddenly finds herself in a strange world, and two men from her past appear, she would never have thought it would soon turn into a nightmare.

Unravel a wicked plot by putting together Noemi's destroyed diary, solve enigmatic puzzles, find secret passages, and–remember–prepare to confront the evil before it's too late....

Discover a beautiful dreamworld, where medieval surroundings mix with alien hi-tech machines. Solve challenging riddles. Get to know the people who live in the castle. Become involved in an intriguing plot...

More than 1,200 extremely crisp and highly detailed 3D-pictures that will take your breath away. Moody music, startling environment sounds, and animation sequences will make it an unforgettable game experience!

SYSTEM PowerMac or iMac; at least 60MHz recommended, hard disk; 10 MB disk space available, 7 MB RAM available; 10 MB recommended, Mac OS 7 or above, 13" monitor (640x400 pixels) or larger, 256 colors (8-Bit); thousands of colors (16-Bit) recommended, 4-speed CD-ROM drive; 8-speed or faster recommended. QuickTime system extensions.
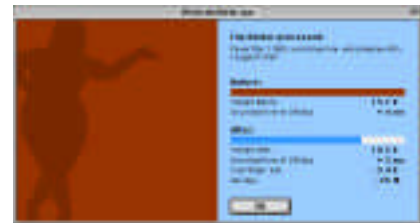

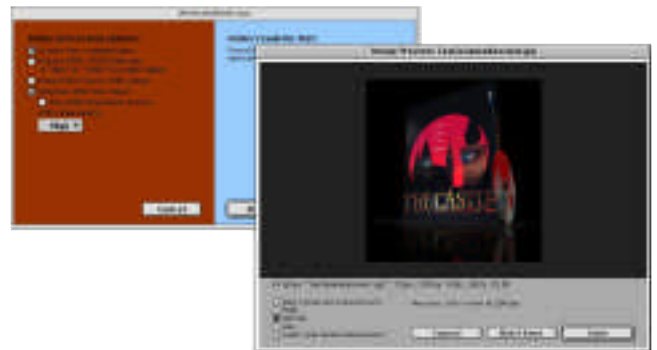

Mac OS-only. The software is not Windows/PC-compatible! No PC version planned.

NOTE Content may be unsuitable for children 16 and under.

CD-ROM US$29.95

WEBSITEDIETICIAN

DESCRIPTION WYSIWYG-HTML editors some-times do an awful job when it comes to writing HTML code.

Some auto-format HTML code using dozens of unnecessary characters. Suddenly you got files occupying 65KB when only 45KB would accom-plish the same.

Although browsers ignore white space, web ser-vers still have to transmit these bits and bytes, which inevitably adds up to the overall download times.

WebsiteDietician's main features include batch file processing of entire folders, automatic PICT to JPEG conversion, live preview of JPEG compres-sion, as well as drag&drop ability. Further there is an automatic data backup feature.

**SYSTEM** Any PowerMac, 6 MB of available RAM, and system 7 or above.

Registered users can ask for a 68K version. (Put a comment onto the order form)

Mac OS-only. The software is not Windows/ PC-compatible! No PC version planned.

TEXTBROOM

DESCRIPTION TextBroom is an utility that handles nightmarish text files. Suppose you got a list containing 2,796 lines of e-mail addresses and you suspect it to contain duplicate entries. TextBroom lets you remove all duplicate lines easily with just one click.

Or perhaps you just saved a spreadsheet from within Excel "As plain text"; the resulting document now contains no less than ten thousand tabs; 10, 12, 17, 31, etc. tabulators in a row. Before you despair, let TextBroom replace the superfluous tabs with just a single one or with the character you specify.

Another feature is the smart finding&replacing of funny number separators, e.g. the apostrophe within "10'000", while the string "you're", also containing an apostrophe, will not be changed.

Of great value is the picking of words or lines containing certain characters. Suppose you got a large text file with e-mail addresses littered everywhere; just specify "@" as the search char and TextBroom will dutifully collect a return-delimited list of all the e-mail addresses found in the text.
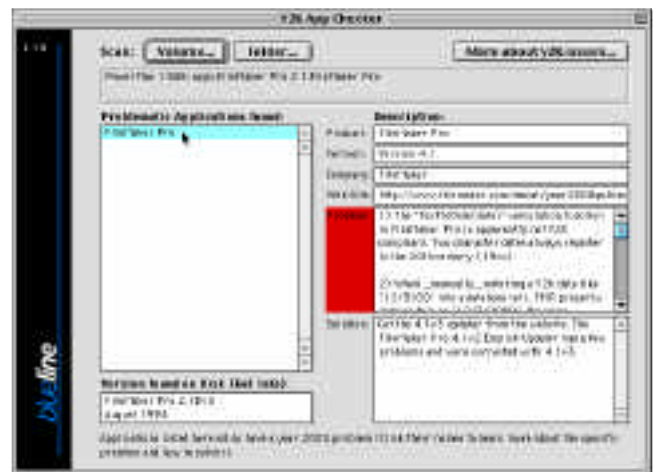

SYSTEM Any PowerMac, 6 MB of available RAM, and system 7 or above.

Registered users can ask for a 68K version. (Put a comment onto the order form)

Mac OS-only. The software is not Windows/PC-compatible! No PC version planned.

Y2K APP CHECKER PROFESSIONAL EDITION

DESCRIPTION Although your Mac hardware and the Mac operating system are fully year 2000-compatible, it doesn't mean your software is.

Y2K App Checker checks your installed software in accordance to the database from Macnologist.com, the currently most complete resource available regarding applications with y2K issues.

If the program finds any applications that have a known year 2000 incompatibility, it lists the programs' names, their specific problems, and the recommended solutions, along with the companies' web site URLs.

SYSTEM Any Macintosh, iMac, or Mac clone, 4 MB of available RAM, and system 7 or above.

Mac OS-only. The software is not Windows/PC-compatible! No PC version planned.

NOTE The database of not-so-compliant applications is a third-party product researched and updated by Macnologist.
