

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion, and the number of people aged 65 and over is expected to increase from 0.2 billion to 0.5 billion.

As a result of the demographic changes, the number of people in the world who are in the working age group (15-64 years) is expected to increase from 2.5 billion to 3.5 billion. This increase in the working age population will have a significant impact on the global labor market.

The demographic changes will also have a significant impact on the global economy. The increase in the working age population will lead to an increase in the demand for labor, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global economy.

The demographic changes will also have a significant impact on the global environment. The increase in the working age population will lead to an increase in the demand for resources, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global environment.

The demographic changes will also have a significant impact on the global society. The increase in the working age population will lead to an increase in the demand for social services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global society.

The demographic changes will also have a significant impact on the global culture. The increase in the working age population will lead to an increase in the demand for cultural services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global culture.

The demographic changes will also have a significant impact on the global politics. The increase in the working age population will lead to an increase in the demand for political services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global politics.

The demographic changes will also have a significant impact on the global science and technology. The increase in the working age population will lead to an increase in the demand for scientific and technological services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global science and technology.

The demographic changes will also have a significant impact on the global health. The increase in the working age population will lead to an increase in the demand for health services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global health.

The demographic changes will also have a significant impact on the global education. The increase in the working age population will lead to an increase in the demand for educational services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global education.

The demographic changes will also have a significant impact on the global environment. The increase in the working age population will lead to an increase in the demand for environmental services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global environment.

The demographic changes will also have a significant impact on the global society. The increase in the working age population will lead to an increase in the demand for social services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global society.

The demographic changes will also have a significant impact on the global culture. The increase in the working age population will lead to an increase in the demand for cultural services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global culture.

The demographic changes will also have a significant impact on the global politics. The increase in the working age population will lead to an increase in the demand for political services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global politics.

The demographic changes will also have a significant impact on the global science and technology. The increase in the working age population will lead to an increase in the demand for scientific and technological services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global science and technology.

The demographic changes will also have a significant impact on the global health. The increase in the working age population will lead to an increase in the demand for health services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global health.

The demographic changes will also have a significant impact on the global education. The increase in the working age population will lead to an increase in the demand for educational services, which will in turn lead to an increase in the demand for goods and services. This will lead to an increase in the global education.
