May 1993

This Technical Note contains a collection of Q&As relating to a specific topic—questions you've sent the Developer Support Center (DSC) along with answers from the DSC engineers. While DSC engineers have checked the Q&A content for accuracy, the Q&A Technical Notes don't have the editing and organization of other Technical Notes. The Q&A function is to get new technical information and updates to you quickly, saving the polish for when the information migrates into reference manuals.

Q&As are now included with Technical Notes to make access to technical updates easier for you. If you have comments or suggestions about Q&A content or distribution, please let us know by sending an AppleLink to DEVFEEDBACK. Apple Partners may send technical questions about Q&A content to DEVSUPPORT for resolution.

New Q&As this month:

QuickTime 1.5 and faulty patch of UnloadScrap

QuickTime 1.5 and faulty patch of UnloadScrap

Date Written: 11/24/92

Last reviewed: 3/1/93

QuickTime 1.5 introduces a bug in the UnloadScrap call. It patches UnloadScrap so that if the scrap is already unloaded (that is, ScrapHandle is NIL), UnloadScrap immediately returns without setting the return value to noErr. This results in a bogus error code being returned unless I initialize the result beforehand.

Thanks for the bug report about QuickTime 1.5 and its faulty patch of UnloadScrap. Until the bug's fixed, you have a reasonable workaround: setting the result to 0 to begin with.
