

## USING THE CONTROL SESSION DIALOG

This dialog allows you to control the configuration of the session which is currently on top.

"Shrink on MultiFinder Switch": When you switch from Comet to another application under MultiFinder the screen will automatically shrink to a small icon and expand. This feature helps make the TrashCan more accessible under MultiFinder.

"Close window when session closes": Will close the window and its corresponding document automatically when your session is closed or aborted.

"Use Block Cursor/Use Underline Cursor": Changes the cursor from an underline to a block, or vice versa

"Blink Cursor": Determines whether the cursor will blink or stay on continuously.

## .EDIT WINDOW ITEMS

"Delete Returns in session.edit automatically on download": If you download a file with the same name as the session with ".edit" appended, it will be added to the session's .edit window; this option allows you to have the Carriage Returns at the end of each line stripped out automatically.

"Add Returns to session.edit automatically on upload": Like the above, except that Carriage Returns will be added automatically to the end of the lines where the text was wrapped in the .edit window.
