Installation

Requirements

Communicate operates on any Macintosh family computer provided it is equipped as follows:

System Software:
7.0 or later
RAM:
At least two megabytes
Hard Disk:
At least two megabytes available

Though Communicate is compatible with System 7.0 or later, you should always use the latest System and Finder recommended by Apple Computer for use with your Macintosh.

Installation

Installation is fairly simple, and can be performed by dropping some of the files onto the active system folder.

The following files are Communications Toolbox Tools. Drag them to the System Folder, they will be placed in the extensions folder:

Apple Modem Tool

XMODEM Tool

VT102 Tool

Drag the following font to the System Folder. It will be placed in the System (7.0) or Fonts Folder (7.1 or better):

VT102Font

What now?

The software is now fully installed on your Macintosh, there is no need to restart. Read on to start Communicating!
