

The **Server** menu contains commands to Start and Stop file sharing. Selecting “**Start**” is equivalent to opening the “Sharing Setup” control panel and clicking the “Start” button. Conversely, selecting “**Stop**” is equivalent to clicking the “Stop” button.

The “Logging” menu command, which is currently disabled, will eventually let you turn on a feature which will log file sharing actions like people connecting, errors and the like to a text file for later reference.
