The Users menu contains commands to control and communicate with users of your file sharing server. The contents of this menu are disabled since their features are unimplemented at this time.

The "Online" menu command will open a window showing all users currently connected and giving you a chance to disconnect them.

The "Accounts" command will let you edit user's privileges just like the "Users & Groups" control panel. It will also give you access to new features like restricting users so they may only access your file sharing server during certain times of the day and disabling users after periods of inactivity.

The "Message" command will let you send messages to connected users.

The "Greeting" will allow you to create a greeting which is shown to all users when they first connect to your file sharing server.
