

Reader Format Driver

Pict

Version 1.0

Standard Macintosh™ Picture format

This format driver opens standard Macintosh™ pictures, type 1 and type 2. It can also copy the entire picture to the Clipboard.

Notes On Use...

- Each PICT document uses an amount of memory approximately equal to its file size plus an additional 5K for overhead.
- Copying large pictures to the Clipboard may fail if there is not enough free memory available.
- The Finder may not be able to display the picture in the Clipboard if the picture is too large or contains color information.
