If you've ever had to look at a hex dump of a file one of your
programs has created, and wished that you could translate hex
into short, long, float, char s in your head, then this program
is for you!

DataTool is a data browser which supports user defined records
and fields. The user may save a record specification as a
hierarchical menu item. This program will browse any data fork
on a mounted volume. DataTool opens the data forks with read
only privileges, so it is impossible for DataTool to corrupt any
of your files.

This program is "shareware". If you find it useful, send Applied
Technical Software $16.00 and you will get the latest release
version and one free upgrade as more features are added. Because
this product is being marketed as shareware, your response will
determine the future of this product. Applied Technical Software
doesn't have the resources to enhance this product if no one
buys it. Also your input regarding features is taken vary
seriously.

This version has a run time limit of 5 minutes per use.
A paid for "release" version has NO run time limit.

We hope that you find DataTool useful. Applied Technical
Software authorizes the use and free distribution, by any
medium, of this package so-long as it remains unaltered and
intact, and it is before 11/1/93. The representation of data by
DataTool has been validated to the extent possible, but Applied
Technical Software does not warrantee any such representation
against errors. Use DataTool at your own risk
