Post Calc 1.0

If you have found `normal' in-fix calculators cumbersome and you wish that a post-fix calculator existed for the Mac, **Post Calc** is for you.

Watch it will add, subtract, multiply and divide right before your eyes in a fury of computing power. Better yet, it has really cool buttons! But, don't spend all day clicking. You've got towels to fold.

Post Calc is freeware and is completely copyrighted by Brian D. Barnhart, 1993. It was written in THINK C, so portions copyrighted Symantic. It may not be distributed on any mass shareware/freeware deals so look out for my hired task force. This file must be included with the Post Calc 1.0 application.

For information about Post Calc, please write to me at:
