The Math Lab will provide teachers and parents with an extensive mathematical teaching and testing resource. Students will be able to study basic addition, subtraction, multiplication and division at any level. Students can work with equations as simple as $1+1=2$ or as difficult as $100 * 100= 10,000$. This program will replace the need for math dittos and flash cards with a more exciting and fun way to learn math!

The Math Lab is a full blown color compiled application with many custom features. First choose a subject Addition, Subtraction, Multiplication or Division. Then set the appropriate level of difficulty. Students have several options for entering answers.

Multiple choice, by clicking with the answer with the mouse
Multiple choice, by pressing A,B,C,D,E on the computer keypad
Manual mode, by typing in the answer (no choice will be provided)

These options will enable young children to use the program. All they have to know is their letters A,B,C,D,E.

There are a few features that teachers will be especially interested in. The Math Lab has been designed for testing and also for unsupervised lesson assignments. A grade keeping system has been built in which will include the following report. Student's Name, Score, Activity, Elapsed time and date. Registered users will be provided with a teachers code which will enable them to lock or unlock the grade records and to have access to an infinite number of equations. Teachers will have a complete record of all unsupervised assignments. Students will not be able to tamper with the scores. Registered teachers will also be able to disable the help system so that students must figure out the answers on their own and guarantee that the records are valid. Teachers can print the scores and save it as an official test record.

The program as is is Shareware. If you send in the \$10.00 registration fee, I will send you the code to access all the programs extended features. Educational Computer Resources will provide all registered users with special consideration. Your programs will be guaranteed. If there are any unforeseen compatibility problems or bugs contact me about an immediate upgrade or fix.

P.S If you do not want to save money on the download time please send \$5.00 directly to me for the equivalent disk. Enjoy!
