Welcome to Catalog 3.0 !!!

Catalog 3.0 can display a "directory listing" or "catalog" of any HFS volume.   The volume to be cataloged must first be mounted before Catalog 3.0 is run.   To catalog a volume, simply find the volume's name under the Catalog Menu.   To catalog additional volumes, the current volume catalog must first be closed (only one catalog can be viewed at a time).

The catalog information can be saved to a TEXT file (best viewed in mono-spaced Font), or sent to the printer.   Just choose Save... or Print..., respectively.   Also, Catalog 3.0 supports Page Setup..., so save a tree and print at 75% or so.
