## Modem Q&As

### Devices

Revised by: Developer Support Center

December 1992

Written by: Developer Support Center

December 1992

This Technical Note contains a collection of Q&As relating to a specific topic—questions you’ve sent the Developer Support Center (DSC) along with answers from the DSC engineers. While DSC engineers have checked the Q&A content for accuracy, the Q&A Technical Notes don’t have the editing and organization of other Technical Notes. The Q&A function is to get new technical information and updates to you quickly, saving the polish for when the information migrates into reference manuals.

Q&As are now included with Technical Notes to make access to technical updates easier for you. If you have comments or suggestions about Q&A content or distribution, please let us know by sending an AppleLink to DEVFEEDBACK. Apple Partners may send technical questions about Q&A content to DEVSUPPORT for resolution.

### PowerBook FAX Modem and header line

Date Written: 2/18/92

Last reviewed: 5/21/92

I can’t get the FAX header line to print on the top of pages FAXed from my PowerBook 170 FAX modem. The information is input in the Sender information box but never appears on the FAX document. The PowerBook FAX Modem User’s Guide indicates that this capability exists. What gives?

---

The PowerBook FAX modem does not include any header in the FAXed page. It sends the Station ID, but the ID information is not included in the page data. It’s the responsibility of the receiving machine to replace the beginning of the page data with the header information (generally overwriting the top 4 mm of the page). So it’s normal for the header information not to print with some FAX machines.

Additionally, the smallest negotiable format in FAX is A4 (a European 12-inch page.) When an Apple FAX is sent to a Group 3 FAX machine, the FAX is sent graphically as a U.S. 11-inch formatted page, but because of Apple’s imaging implementation the receiving FAX is still told that it is receiving an A4 page. On the PowerBook side, the FAX sends only the

U.S. letter length, but some FAX machines add blank lines to fit with the A4 format. Some thermal FAX machines stop printing as soon as they do not receive any more data, some don't.
