

## Overview:

QwikBILL™ is designed to do four tasks quickly and effectively:

- Maintain client records
- Create invoices
- Record payments
- Prepare reports showing account activity

There ARE more complicated and complex accounting systems available, but remember, QwikBILL™ was created for those who want to effectively manage their billing without dedicating their lives to this activity.

QwikBILL™ was created for companies who have tried or considered using other billing systems available for the Macintosh, but could not find the balanced combination of simplicity and sophistication they were looking for. QwikBILL™ fills that niche perfectly!

If your future needs eventually go beyond the capabilities of QwikBILL™ you are always protected with its export capabilities. Every transaction you enter in QwikBILL™ can be exported to tab-separated text files for transfer to any other future system you might require.

QwikBILL™ operates from this central Home Window. Each of the major functions of the program is listed and you make your choice by clicking the appropriate button. And then, when you are finished working in each of these specialized areas, you will find a button to return you to the Home Window central square.
