

Copying to Clipboard.

You can copy the current graph to the clipboard in order to export the graph to another document, such as a word processor or spreadsheet. To do this, just select '**Copy**' from the **Edit** menu, or click the Copy tool, which looks like a pair of scissors.

The graph is normally copied to the clipboard as a scaleable QuickDraw graphic, which means it retains all of the original drawing commands. You can further edit an image like this with a drawing application such as MacDraw™. If you prefer to export the image as a bitmap, which is more like a paint-type image, you can do so by holding down the option key when selecting '**Copy**'.

If you want to copy only the part of the graph, select it with the Marquee Tool and choose '**Copy**'. In this case, the image must always be exported as a bitmap.

You may view the current Clipboard contents by selecting '**Show Clipboard**' from the **Edit** menu.
