Graphplot Menu Reference.

The menus in the menu bar are:

Apple Menu - contains the 'About Graphplot' item plus a list of items in the Apple Menu Items folder (System 7 or later), or a list of current Desk Accessories (System 6). If you are running under System 6, this menu also contains the 'Graphplot Help' menu command, which displays this help system.

File Menu - Allows you to create new graph windows, open graphs saved on disk, save a graph to a disk file, print a graph and Quit Graphplot.

Edit Menu - Allows   you to place a graph on the Clipboard, show the Clipboard, and create graphs which are derivatives of the current graph.

Setup Menu - Opens dialog boxes for setting the Scales, setting Secondary Variable parameters, creating Labels for the graph, changing the plotting Resolution and plotting the current Function.

Functions Menu - contains many predefined functions which can be plotted immediately, grouped into eight categories, the 'User Defined' menu, the 'Recent' menu, and the Define Function menu item.

Windows Menu - contains the Stack and Tile commands, a command for opening the Mouse Coordinates window, and a list of all other open windows which is maintained dynamically.

Help Menu - (System 7 only) Contains the 'Graphplot Help' menu item which displays this help system.
