User Defined Folder.

This folder contains Graphplot files that you have created. Files in this folder will appear in the User Defined menu. Selecting the file from the menu will automatically open the file. This is quicker that using the Open menu command.

To work, the folder must be named "User Defined" and be at the same level as the Graphplot application. (i.e. in the same folder, or on the desktop).

If you save a file into this folder with the Save As command, the menu will automatically be updated. If you select an item more than once, you will open multiple copies of the graph.
