

The Exile FAQ v1.0

y Jeff Vogel

This is the FAQ (Frequently Asked Questions) file for Exile: Escape From the Pit, the full-length, highly detailed shareware fantasy role-playing game for the Macintosh.

This FAQ contains a description of the game, system requirements, tips regarding common problems, and hints for the trickiest puzzles (Oh well, having people buy the hint book was nice while it lasted.)

This is a FAQ in the truest form - everything in here I've typed out for stuck gamers more times than I care to think of. I don't mind this, of course. I love hearing from and helping people. I can be reached at eden@math.rutgers.edu, SpidWeb on AOL, and 76463,1521 on CompuServe. Feel free to drop me a note!

Fantasoft, the makers of Realmz, and Spiderweb Software present a new, full-length, fantasy role-playing shareware game for the mac:

EXILE: Escape From The Pit v1.1

by Jeff and Shirley Vogel

"4 out of 5 joysticks" - Inside Mac Games Magazine

"exile n. 1. Enforced removal from one's native country. 2. The state or circumstance of being in Exile."

Above ground, there is only one nation: The Empire. That's all it's called. What need is there for fancy names when there's only one game in town?

The Empire maintains order at all costs. Misfits, magical creatures, and petty criminals of all sorts are unwanted, and the Empire has one tried and true way of disposing of them...

They are sent through a one-way teleporter into the Underworld. And you are considered misfits.

There are hundreds of miles of tunnels under the surface world, filled with creatures fantastic and mundane, all scrabbling for the same limited food and limited space. It is into this hostile, war-ravaged land that you are sent to find your fortune. Or just try to survive.

Exile is a shareware full-length fantasy role-playing game. It boasts intricate game machinery and an enormous, highly detailed world. Among its features:

- * An enormous cave system, filled with special encounters and almost 80 towns and dungeon levels.
- * Many, many people to talk to and puzzles to solve.
- * Multiple game objectives. Win the game in one way, or several.

- * Elegant, skill based character generation system. No character classes - customize your characters as much as you want.
- * Full auto-mapping.
- * Ultima-like top-down view.
- * First half of game available, at full functionality, without paying. Play many of the towns and dungeons for free.
- * Extensively tested and debugged. You may be my customer, but you won't be my beta tester.

There is also a hint book (\$6.50) and a character editor (\$10). The Editor can heal the party, give gold and food, unkill dragons, and move parties out of towns in the unregistered version.

1.1 What are the system requirements?

Exile requires System 7, 256 colors, 2 MIB free memory, 3 MIB disk space, and a 13" monitor.

Q: What about my PowerBook?

A: Exile will not run on most PowerBooks. It will run on the 520c, and I would guess any powerbook with 256 colors.

Q: I have 16 colors. Will it run?

A: Exile sometimes runs on 16 color macs. It's a very dicey proposition, and when it does run, the colors are ugly. As long as you don't have a PowerBook, it may be worth a shot.

Q: I have System 6. Will it run?

A: I don't know. Nobody with 256 colors and System 6 has ever gotten back to me on whether it ran. I think it will. I tried to make the game System 6 compatible. But I don't know.

Q: What about my 12" monitor?

A: Yes. But. With a little tinkering with ResEdit, the game can run on a 12" monitor. That's what someone told me anyway. First person who modifies the game so it runs on a 12" monitor and sends me a copy of the modified version gets a free registration.

Q: What about AV Macs?

A: Go for it! It runs like a charm.

Q: I hear it crashes on older Macs, like the II, IIC, IICx, etc.

A: It did, but that bug was fixed months ago. Go for it!

1.2 Why should I register?

Exile is \$25 shareware. Without registering, you can play the first half of the game at full functionality, and believe me, that's a LOT of game.

Upon registration, you get a code that lets you into the second half of the game, a printed out instruction manual, and a command reference card. Plus, you have made it possible for a full-time Mac game programmer to continue making software for our favorite platform.

1.3 Bugs and troubleshooting.

There are a few problems people have had. Most are fixed, but...

Q: The game sometimes has blank spell-casting and training windows. What do I do?

A: Exit the game. Select More Info about Exile (command-I). Raise the memory requirements (at the bottom of the window) by 100 K each (to 2100 K). This is a very rare problem, but that should fix it.

Q: The game is really slow during combat sometimes! Why?

A: Running other applications sometimes causes the game to slow down during fights. Reduce the number of background processes.

Q: It crashes my Mac II (or IIC, or IICx) when I run it!

A: You are running Exile 1.0. This is fixed in later versions. Alternately, if you have ResEdit, change the MDEF of MENU resource 500 to 0. This will fix the problem.

Q: My game became unregistered when I moved up to a new version!

A: When you register, make a copy of your misc.dat file and put it in a safe place. Put in in the folder with the new copy of the game.

Q: I register, but then the game is unregistered when I run it again! What do I do?

A: Sometimes, the game becomes corrupted when it becomes uncompressed. This is the result. Move the misc.dat file to a safe place. Delete the old copy of Exile. Uncompress a new copy. Copy the old misc.dat over the new one. The game should register fine now. If not, call Fantasoft or (preferably) E-mail me.

1.4 Back Up Save Files!

This is not a frequently asked question, but making duplicates of your save files will save you from asking many questions. Should you leave Demonslayer sitting around in a town or kill a friendly dragon or get trapped in a dungeon with zillions of monsters between you and the door, backup save slots will save all concerned a lot of trouble.

1.5 Does this feature exist?

Q: How do I save maps?

A: Move up to version 1.1 or later.

Q: How do I store away my excess items? I can't carry enough!

A: Same answer.

1.6 How big is this game, anyway?

Big. The lair of Sulfras, Erika's tower, and Grah-Hoth's castle are at the far western edge. The Castle is at the east-west halfway point. Fort Duvno is at the north-south halfway point. There are 77 towns and dungeon levels, and 42 outdoor sections. Every section, town and dungeon has a bunch of special encounters. There's a lot of game there.
