

## System Requirements

AutoCat™ uses System 7 enhancements, especially aliases. Consequently, it works only on Macintoshes running System 7.0 or later.

## Installing AutoCat™

Drop it on the icon of your closed System Folder and restart your Macintosh. That's all !

AutoCat™ will create a preferences file called AutoCat™ Prefs in your Preferences Folder. This file initially contains the default settings, which will be updated with your own settings whenever you modify settings in the control panel.
