

This patch is an update to an earlier one that I made after reviewing the MacInTouch column in the 09.19.94 issue of MacWeek (pg. 38, last paragraph). The first revision works with Find File 1.0 (which comes with System 7.5), while this version works with Find File 1.1.1 (available with System 7.5 Update 1.0).

To use, launch this patcher, and select your Find File application (usually within the System Folder/Apple Menu Items folder).

By installing this patch, you will enable additional find options in the new System 7.5 find command.

Thanks to Marc Jourlait of Apple Europe for alerting me to the fact that the previous patcher didn't work with the new version of Find File.

Enjoy, and send any comments to:

Tony Andreoli
