

Process Jumper should be installed using ResEdit. I have preset it at key 9, but by changing the resource number, you can preset it to anyone of the numeric keys. PJ allows you to cycle through the open Applications. PJ is "nice-ware"; basically I'd like you to send me something (anything...postcard, letter, Money, keys to your porsche etc.) My address is 920 78 Ave. S.W. Calgary, AB. Canada...I'd just like to know how far this thing has spread.

If you have any suggestions for PJ, let me know.
