

## Introduction

As of version 1.5, the Apple Modem Tool connection tool has had the ability to customize the list of modems that it supports. One way of doing this is to import a "modem definition file".

This archive contains files that have been provided by modem manufacturers as well as individuals. As of this writing, the archive contains files provided by Prometheus, Supra and Global Village for their modems, as well as the "AMT More Modems" archive provided by Jim Hebert. They currently contain definitions for the following brands/models of modem:

### AMT-Global Village (Provided by Global Village Communications, Inc.)

- Global Village TelePort ADB/Bronze
- Global Village TelePort Bronze II
- Global Village TelePort Bronze Performa
- Global Village TelePort Silver/Gold
- Global Village TelePort Mercury
- Global Village PowerPort Bronze
- Global Village PowerPort V.32
- Global Village PowerPort Silver/Gold
- Global Village PowerPort Mercury

### AMT-More Modems (Provided by Jim Hebert)

- PPI-14400FXSA
- AT&T Dataport 14.4
