Mascot 1.3

Public Release - Freeware
By Michael E. Romaniuk (mromaniu@cln.etc.bc.ca)

This is Mascot, which performs 5 tasks (and some user definable functions) for First Class Administrators.   They are:

Conference Creator

1 - Will take a Desktop/Conference Capture and convert it to a batch admin command to make those conferences/folders on another sever (good if you want to start gating a large number of conferences!)

2 - Will take a return delimited list of conferences/folders (in a text file) and convert it to batch admin to create those conferences on a server.

Batch Admin -> Data Base

3 - Will convert a user list to a comma delimited document, which can be imported to most data base programs.

Log Scanner

4 - Will go through your FC Server log and give you a detailed report on possible Hacking, FC Errors and some statistical information.

Admin Information

5 - This lists some basic information that many admins need.

Changes Since Version 1.2

• Cleaned up a few minor text errors
• Change the quit command
• General Clean up
