

Apple Remote Access

When dialing in with Apple Remote Access (ARA), the Network pop-up menu will contain two unusual network numbers: 0 (zero) and 65,535. Devices shown as network 0 (zero) are connected to the Macintosh computer's (LocalTalk or EtherTalk) network. Devices shown on network 65,535 are those that are on the same AppleTalk network as the ARA server. The "real" network number is not visible to MacPing, since ARA re-maps network numbers.
