MacPing was written by Rich Brown, Brian Xiaoxia Ye, and Bill Fisher. Their address is:

Dartmouth College
6028 Kiewit Computation Center
Hanover, NH 03755-3523 USA
603/646-2643

Thanks to:

Stan Dunten at Dartmouth College came up with the idea for the "oscilloscope" display.   He has long wanted a program which will indicate whether an AppleTalk node is responding reliably or not.

Thanks, too, go to Paul Hartenstine and Ted Painter who implemented a preliminary version of this program as part of a CS project.   Their prototype wasn't fast enough for production use, but it showed that the idea had heart.   It really wow'ed the network technicians.

Thanks to R. Fronabarger, who wrote the original Styled Text help dialog code, which was adapted for MacPing's new non-modal help window.

Thanks to Richard M. Siegel for the use of his "UGenericPrint" routine which took care of all of the "gory details" in using the Printing Manager, and to Matthew Xavier Mora for compiling this valuable piece of code into his USENET Macintosh Programmer's Guide, making it readily available.

Thanks to Paul DuBois and Owen Hartnett for creating TransSkel, a public domain "skeleton" Macintosh program.   It helped to know that I didn't have to write the whole thing from scratch.

And finally, thanks to our loyal beta-testers: Mike Alexander, Dave Ballowe, Charlie Clark, Mark Doyle, Steve Erde, Tom Evans, Greg Ferguson, Roy Hockett, Bill Jackson, Bruce Kozlik, Ben Lieberman, Ken Lindahl, Sean Lydon, Kee Nethery, Chris Ranch, John Stephens, and Joan VanVranken.
