

## ADDING APPLICATIONS FOR VERSIONING

As a purchaser of Versionary initial release, you have access to Versionary's Variety pack of applications. This "pack" allows you to make versions of documents created with several commonly-used applications. (Other Versionary application packs are available for other popular applications, including those for desktop publishers, writers, artists, developers, managers, lawyers, scientists, etc. Contact Santorini at 415-563-6398 for details.)

To have documents versioned, you must add the appropriate applications to the main panel list. To do this, first hit the "Add Apps..." button. When the Add Apps dialog appears, you will see the list of seven applications in the Variety pack. One by one, select applications from this list and add them to the main panel list. When you are done, hit the Done button.

At any time, to turn versioning off for an application in the main list, simply remove that application from the main list. You will always be able to re-add it later if you want to turn versioning back on for that application.
