ScreenMan has been tested on System 6.0.7, System 7.0.1, System 7.1, System 7 Pro, System 7.5 and A/UX on SE/30, LC, Quadra 700, PowerBook 100, PowerMac 6100/60, PowerMac 7100/66AV and other systems. It worked in black&white, 16 colors, 256, thousands and millions of colors.

But as all programmers know, "There is always one more bug". So if you discover any bugs or problems with ScreenMan, or you are missing any features, please don´t hesitate to send me a bug report or comment.

The only problem I found and could not solve was importing pictures from Norton Utilities 2.0. You are hereby warned not to try it! But I still don´t think of it as a bug because the PICT resoures in NU 2.0 do not seem to be standard PICT resources. Even ResEdit crashes when trying to display them, so I think I´m in good company.

ScreenMan currently understands only PICT resources and PICT files although the system software might accept other formats as well. This might be changed in a new version if it seems nessecary. If you have a picture lying around in any other format, please first convert it to either PICT file or PICT resource before importing.
