

TKhyperText

XCMD

No. 4901

Version: 5.0 (ONLY for Registered owners of ToolKit™)

Copyright © 1990 - 1994 by Stan Gilbert

TKHyperText allows you to define a style run within text, such as bold and underlined. When the cursor is over the text it will turn into a magnifying glass when it encounters the specified style. TKHyperText places all text within that style run into a global which you can examine on a mouseDown/Up script.

ð

Examples

ÔTKHyperText "buc"

Parameters

Parameter 1

b,u,o,c: any combination of bold, underline, outline, or condensed to define the style run.

Return Values

ÔTKHyperText will place all words within a style run into a global gTKHText.

Script of a locked text field

```
n mouseWithin
  loba gTKHText -- not really required here
  KHyperText "buc"
nd mouseWithin
```

```
n mouseDown
  loba gTKHText
  f gTKHText <> "" then
    f gTKHText = "alligators" then
      o card "Alligators"
    else if gTKHText = "small animals"
      o card "Rodents"
    nd if
  nd if
  ass mouseDown
nd mouseDown
```
