

- Introduction

TKpassword

XFCN DLOG DITL

No. 4409

Version: 2.4

Copyright © 1990, 1991 by Stan Gilbert

TKpassword is designed to accept a name and password from the user. Bullets replace letters being typed into password field.

- Parameters

Parameter 1: "Prompt,LEFTn,TOPn"

Prompt

Default prompt is "Enter name and password..."

LEFTn (optional - default is centered)

set left coordinates of password dialog to n.

TOPn (optional - default is centered)

set top coordinates of password dialog to n.

- Requirements

DLOG resource # 4409 "TKpassword"

DITL resource # 4409 "TKpassword"

- Return Values

Null (") if user Cancels or "Name,Password".

- Related Topics

TKdoTEXT can be used to store and retrieve a list of names and/or passwords to compare against the user input to TKpassword.

- Special Features

- When the user types in the password each character shows up as a bullet ("•") so anyone looking over their shoulder will not be able to see what is typed.

- Examples

```
ÔËget TKpassword()
ËËget TKpassword("Student name and Password...")
ËËget TKpassword("left40,top50")
```
