

TransDisplay 3.04 — Release Notes

This document is an adjunct to the TransDisplay Programmer's Manual. It lists changes and additions specific to release 3.04. If you have only programmed with pre-3.0 releases of TransDisplay, be sure to read any earlier 3.XX release notes as well.

- Revised the TransDisplay manual slightly. This is the first revision that reflects any changes that have been made since release 3.0 began.
- New TransDisplay calls `DisplayShort()` and `DisplayHexShort()` for displaying short's. These should be used instead of `DisplayInt()` and `DisplayHexInt()`, which are now deprecated and will disappear in the future.
- New TransDisplay call `DisplayCString()` for displaying C strings. (`DisplayString()` takes Pascal strings).
- New TransDisplay call `DisplayOSType()` for displaying `OSType` variables.
