

### Font Name and Size pop-up menus

Use the Font popup menu to select the initial font used for your topic text, and likewise the Size popup menu to select the initial font size used for your topic text. These two menus are illustrated below.

Initially your Notebook topic text will consist of only one font and one size (those selected by using the Font and Size popup menus). Geneva 9 point is the default size.

However, you can use Notebook Maker to modify some of the text when the Notebook has been created, or if you have selected the 'Allow User Edit' preference, the user of the Notebook can modify the font styles herself.
