Sound Input Q&As

Toolbox

Revised by: Developer Support Center

October 1992

Written by: Developer Support Center

October 1990

This Technical Note contains a collection of Q&As relating to a specific topic—questions you’ve sent the Developer Support Center (DSC) along with answers from the DSC engineers. While DSC engineers have checked the Q&A content for accuracy, the Q&A Technical Notes don’t have the editing and organization of other Technical Notes. The Q&A function is to get new technical information and updates to you quickly, saving the polish for when the information migrates into reference manuals.

Q&As are now included with Technical Notes to make access to technical updates easier for you. If you have comments or suggestions about Q&A content or distribution, please let us know by sending an AppleLink to DEVFEEDBACK. Apple Partners may send technical questions about Q&A content to DEVSUPPORT for resolution.

Macintosh IIsi sound input documentation and samples

Date Written: 4/30/91

Last reviewed: 3/18/92

Where can we learn how to access the recording capabilities of the Macintosh IIsi? We need to be able to acquire and process the samples in real time under program control (that is, no “push to record” button).

Inside Macintosh Volume VI contains the comprehensive documentation on using sound with the Macintosh. It supersedes the information in the Sound Manager chapter of *Inside Macintosh* Volume V. “Recording Sounds Directly From Sound Input Devices” is a section pertinent to your concerns. Also, check the SC.024.SoundApp folder in the DTS Sample Code folder and sound Q&As on AppleLink and on the latest developer CDs.
