Hubris Software
Announces Upgrades September 17, 1993

Eight externals for the Hermes BBS have been upgraded. They have been updated to reflect the changes in Hermes 2.5. Below you will find information about obtaining upgrades.

Bulletin Manager - Display information bulletins at logon and from main menu. Bulletins can be mandatory or optional. "Tri-level" bulletins can be automatically displayed to users according to their security level. Up to 20 "Regular" bulletins can be displayed from a bulletin menu. The menu or any of the individual bulletins can also be mandatory or optional.

Logoff Manager - Formerly "End'r". Display statistics at logoff and a customizable message to users depending on their downloads ratio. Also has option to give first time callers the option of saving or deleting their user record. Very nice for weeding out people who won't be calling back.

Logon Manager - Formerly "Logger". Display attractive ANSI logon stats for today's callers. Option to save old logs. Reports for both ANSI and non-ANSI users.

New User Manager - Formerly "Validity". Automate much of the validation process. Ask new users a series of questions and automatically set their security level and restriction information according to their responses. Saves all responses in a number of text formats. Displays BBS agreement form and logs answer. Automatically adds BBS information of visiting sysops to the BBS list.

Quote Manager - Display a random quote at logon or from the externals menu. Allows users to enter new quotes and saves them in both text and ANSI formats. Automatically formats quotes (justification and ANSI/text headers and footers)

Reports Manager - Formerly "Report'r". Generate text file reports for many BBS and user statistics. Reports are very useful for making sure BBS is set up correctly.

Stats Manager - Display color ANSI usage graphs for today's usage, hourly usage, day of the week usage and monthly usage. Saves BBS data for any length of time in very little space.

User Manager - Update all user records according to certain criteria. Control access to the transfer sections with a monthly file quota system. Displays recent uploads on entry to transfer sections. Automatically purge old users on nightly basis. Many other useful features.

Order Form
