Hubris Software Announces Upgrades

September 17, 1993

Five externals for the Hermes BBS have been upgraded. They have been updated to reflect the changes in Hermes 2.5. Below you will find information about obtaining upgrades.

Auto Backup - Automatically (or manually) backs up important BBS files each day. You decide which files will be backed up and when. Using the Stuffit Engine this external will compress these files saving up to 90% of the space that a backup would otherwise take.

Auto Fade - The original screen saver for Hermes. Handle multiple monitors, has configurable fade and no-fade corners, scalable font size and has several options for saving the screen when no one is around. Also has feature that lets you turn off all display during times the sysop is not around.

Auto Filelist - Automatically (or manually) creates a variety of file lists for Hermes. Setup file lists to reflect the security level of users who will see them. Will optionally compress the list with the Stuffit Engine saving 50-75%.

Auto Purge - Automatically (or manually) deletes users who have not logged on in a certain period of time. Configurable to exempt certain users. Logs all deletions so you will know what action it has taken.

Auto Reboot - Automatically (or manually) reboots or shuts down your computer or quits Hermes at a time you decide. Waits until all users have logged off and saves all data before taking its action.

Order Form
