

Installing the New SE Icons

To install the new SE Icons, use ResEdit (file # 894) or similar utility. While in the utility:

1. Double-Click the SE SYSTEM of the disk you wish to modify causing ICN# to appear. Select it by a single click.
2. Go to EDIT Menu and choose COPY.
3. Double-Click the SYSTEM that you wish to modify.
4. Scroll till you find ICN#...select it by a single click.
5. Go to EDIT Menu and choose PASTE (If that's the final icon you wish to install, click the various CLOSE BOXES till you are asked if you want to save the changed SYSTEM...click YES.).
6. That's it...next time you boot up the new icon should be present replacing the Generic Mac with an SE. If it isn't...you may have to re-build the DESKTOP by inserting the disk while holding down the OPTION and COMMAND keys...then answering YES to the resulting DIALOG BOX question.

To install the remainder of the SE Icons (ImageWriter II, SE GENERAL, SE KEYBOARD, and SE MOUSE) follow the same procedure...replacing each original with its SE Counterart by selecting, copying and pasting as before.

Hope you enjoy these as much as I did creating them!
