

# Apple Basic Color Monitor

The Apple Basic Color Monitor is Apple's most affordable Macintosh color monitor. It offers the resolution, compatibility, and ergonomic design that Macintosh users need for home and office applications.

With .39-millimeter dot pitch and 640-by-480-pixel resolution, the Basic Color Monitor gives you the image quality you need for text documents and graphic images. A built-in, tilt-and-swivel base makes it simple to position the display to the angle you find most comfortable. And brightness, contrast, and on/off controls are conveniently located on the front panel.

The Basic Color Monitor is compatible with the Macintosh LC line, the Macintosh Centris line, the Macintosh Quadra line, and many Macintosh PowerBook computers. It attaches directly to your computer's monitor port for plug-and-play simplicity. And the Basic Color Display meets low-

frequency ELF and VLF requirements for magnetic and electric emissions.

The Apple Basic Color Monitor is the most economical member of the Macintosh half-page display family, which also includes the Macintosh Color Display, a 14-inch monitor equipped with the Trinitron picture tube for superior resolution, brightness, color definition and clarity. The flat, high-contrast screen of the Macintosh Color Display eliminates distortions and delivers crystal-clear resolution over the entire area of the screen—even in your most finely detailed drawings.

In short, the Basic Color Monitor is a good choice for Macintosh users who want the impact and appeal of a color monitor at the most affordable price. And for even brighter color and exceptional resolution, the Macintosh Color Display is an outstanding alternative.

## Apple Basic Color Monitor Features

### Display quality

- > 14-inch screen, 640 horizontal by 480 vertical pixels
- > 39 mm dot pitch

### Ergonomic features

- > Tilt-and-swivel base for adjustment to comfortable viewing angle
- > 60-Hz refresh rate
- > Meets strict SWEDAC MPR-2 requirements for low-frequency (ELF and VLF) magnetic and electric emissions

### Ease of use

- > Plug-and-play simplicity with any Macintosh LC, Macintosh Centris, Macintosh Quadra, or Macintosh PowerBook computer
- > Easy access to brightness, contrast, and on/off controls
