

Macintosh IIx

Whether you're working on a Macintosh today and want more speed and a larger, color display or considering your first Macintosh and looking for plenty of future expansion, Apple has good news for you: The Macintosh IIx, Apple's new, fast, flexible personal computer.

To boost system speed to seven times that of the Macintosh Classic, the Macintosh IIx combines 32-megahertz processing power with a math coprocessor and 32-kilobyte cache. It also comes with a minimum of 4 megabytes of memory—expandable to 68—and an accelerator slot so you can increase performance later on.

The Macintosh IIx also delivers dazzling color. It has built-in 256-color support for the Macintosh Color Display, and can easily be upgraded to deliver 32,000 colors. If that's not enough for the work

you do, you can upgrade the Macintosh IIx to display photo-realistic images in up to 16.7 million colors by plugging an appropriate card into one of three NuBus expansion slots. You also can use the slots to work with large-screen monitors.

The enhanced storage capability of the Macintosh IIx supports up to three internal storage devices. Thus it's an ideal system for working with the wealth of information stored on CD-ROM discs, high-capacity SyQuest drives, and other hard disk drives—without losing valuable desk space.

And when you purchase a Macintosh IIx that's configured with the AppleCD 300i internal CD-ROM drive, you not only get one of the fastest drives available, you also get an upgraded system with 5 megabytes of memory, 32,000-color capability, software for Kodak's new Photo CD format, and a selection of CD-ROM titles.

Product Features

Power and speed

- > 32-MHz 68030 microprocessor
- > 32-MHz 68882 math coprocessor
- > 32K cache

Memory

- > 4 MB of RAM, expandable to 68

Expansion

- > Room for three internal storage devices, including the AppleCD 300i internal CD-ROM drive
- > Three NuBus expansion slots
- > One accelerator slot

Display

- > Built-in support for Apple monitors
- > 256 colors, expandable to 32,000

Features Built Into Every Macintosh

Usability

- > Runs thousands of Macintosh applications
- > Easy to set up, learn, and use

System software

- > System 7 with multitasking, file sharing, Balloon Help, and TrueType fonts

Networking

- > Built-in Local Talk
- > File sharing without a dedicated server

Compatibility

- > Macintosh, MS-DOS, OS/2, and ProDOS floppy disk formats
