

## Design the landscape of your dreams and see it in 3D Landscape

Imagine stepping onto your patio and looking out on a gracefully curving stone pathway leading into a small stand of trees. With *3D Landscape*, now you can design your own landscape and see it in three-dimensions. 3D Landscape helps you explore the potential of your outdoor space, by letting you design with everything from trees and shrubs, to walkways and retaining walls. You can even include decks, gazebos, lights, and sprinklers to put the finishing touches on your layout.

3D Landscape lets you choose the ideal plants and trees from a database of over 400 specimens according to your local growing conditions. Once your layout is complete, use 3D Landscape's *Shadow Caster* to see how the shadows will fall at any time of the day or year. Want to see your landscape in 10 years? 3D Landscape's *Growth Over Time* lets you look into the future.

3D Landscape includes a multimedia "How-To" Guide that explains landscaping principles, techniques, and building projects. Using animation, photography, and sound, you'll learn about important things to consider when selecting plants, working with contractors, and building backyard projects.

### Features:

- + Three-dimensional visualization of landscape designs
- + Plant selection of over 400 specimens
- + Shadow caster
- + Growth over time
- + Multimedia "How-To" guide
- + Calculators for estimating pH, privacy screening heights, and cut/fill volumes.
- + Step-by-step instructions for backyard building projects
