

Prizes to improve your image

This month three lucky readers will be running off with high-performance desktop LED printers from OKI Systems (UK) Ltd. We've also got ATI XPERT@Play graphics accelerator boards for six runners-up.

First and second prizes

Worth over £400 and £320 respectively, the OKIPAGE 6ex and 6e are ideal printers for any busy working environment. They offer PCL5e emulation, IBM and Epson compatibility, and hurtle along printing an impressive six pages per minute. Both also come with Hiper-W, OKI's latest driver software for fast graphics printing.

The 6ex offers 1,200x600dpi (dots per inch) output, and 2Mb of memory as standard - upgradable to a whopping 35Mb. Not far behind, the 6e produces 600dpi-class print, and has 1Mb of upgradable memory.

Third prize

The third prize this month is an OKIPAGE 4w Plus, an updated version of the popular 4w, hailed for its compact size and value for money. The 4w Plus includes Windows NT drivers as well as 3.1 and 95 drivers.

Runners-up

ATI has generously offered us six 3D XPERT@Play graphics accelerator cards, worth £175 each, to give away. Providing 3D, 2D and DVD video acceleration in one, XPERT@Play sets the standard for gaming, multimedia and mainstream graphics packages.

How to enter

Just answer these three easy questions.

1. How much memory does the 6ex have as standard?
2. How many pages per minute can the 6e and 6ex print?
3. The XPERT@Play accelerator board provides 3D, 2D and what else?

Tie-breaker

I'll be overjoyed with an OKI because...
