Running ArtShow3 with CorelDRAW 4.0

The ArtShow 3.0 recommendations specify that you may use version CorelDRAW 3.0 or later. ArtShow 3.0 has the ability under the "Options" setting to place a selected image into CorelDRAW or CorelPHOTO-PAINT.

If you are using CorelDRAW 4 please note the following scenarios.

Scenario 1:

You have removed DRAW 3.0 from your computer and are now using DRAW 4.0.

If this is the situation, then you will have to make some modifications to the WIN.INI file located in the root of the Windows directory.

1. First make a backup copy of your WIN.INI file.
2. Open the WIN.INI into Notepad or some other text editor.
3. Locate a section with the header [CorelDraw3].
4. If the section does not exist then skip to Scenario 2.
5. If the section does exist look for the following:

```
[CorelDraw3]
DrawDir=E:\CORELDRW\DRAW
ChartDir=E:\CORELDRW\CHART
ShowDir=E:\CORELDRW\SHOW
PhotoPaintDir=E:\CORELDRW\PHOTOPNT
TraceDir=E:\CORELDRW\DRAW
MosaicDir=E:\CORELDRW\DRAW
```

6. You will need to modify the lines that pertain to Photo-Paint and CorelDRAW so that they point to the Programs directory under the CorelDRAW 4 directory. An example of what the lines may resemble after making the changes is as follows:

```
[CorelDraw3]
DrawDir=C:\COREL40\PROGRAMS
ChartDir=E:\CORELDRW\CHART
ShowDir=E:\CORELDRW\SHOW
PhotoPaintDir=C:\COREL40\PROGRAMS
TraceDir=E:\CORELDRW\DRAW
```

MosaicDir=E:\CORELDRW\DRAW

7. Next locate a section called [Extensions] and add the following line:
cdr=c:\corel40\programs\coreldrw.exe ^.cdr

8. Save your WIN.INI file.

Scenario 2:

If you did not have the [CorelDraw3] section in your WIN.INI file or did not previously have CorelDRAW 3.0 installed on your system then do the following:

1. Create a backup copy of WIN.INI file that is located in the root of your Windows directory.
2. Open the WIN.INI file into Notepad or some other text editor.
3. Insert the following section into your WIN.INI file making any necessary changes to reflect your drives and/or directories:

```
[CorelDraw3]  
DrawDir=C:\COREL40\PROGRAMS  
PhotoPaintDir=E:\COREL40\PROGRAMS
```

4. Next locate a section called [Extensions] and add the following line:
cdr=c:\corel40\programs\coreldrw.exe ^.cdr

5. Save your WIN.INI file.

Please contact Technical Support if you are encountering any problems with this.
