

Fontographer

by Altsys

These sample Type1 fonts were created with Fontographer, the outline font design and editing program.

The fonts are stored in individual subdirectories. Some of the fonts are not complete typefaces, as some of the characters in the typeface are not represented.

Sample Font	Filename	Directory
Gangle	GANGLE__.*	\DEMOS\ALTSYS\GANGLE
Katyama	KATYAMA__.*	\DEMOS\ALTSYS\KATYAMA
Warterfield	WA____.*	\DEMOS\ALTSYS\WARTERFI

Fontographer creates hi-resolution PostScript and TrueType fonts, downloadable and bitmap fonts, and logos or designs with interchangeable parts. It reads in and writes out standard TrueType and PostScript fonts. It provides three drawing planes for character construction and a tool palette for precise control and handling of points and paths. The software has a number of powerful features, including a pen tool for freeform drawing of strokes, three types of control points for smooth curves and autotracing of images.
